

Unsharp mask problem

04 January 2017 08:46

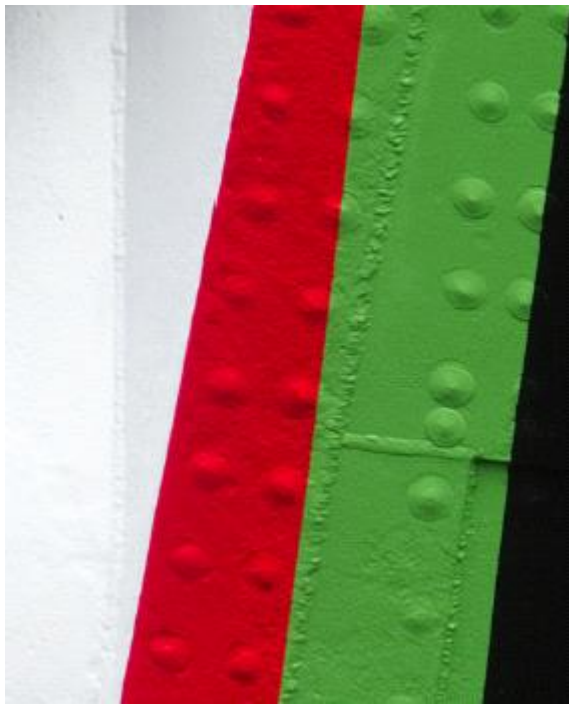

Whilst adjusting, "Before" image screenshot -

"After" image -

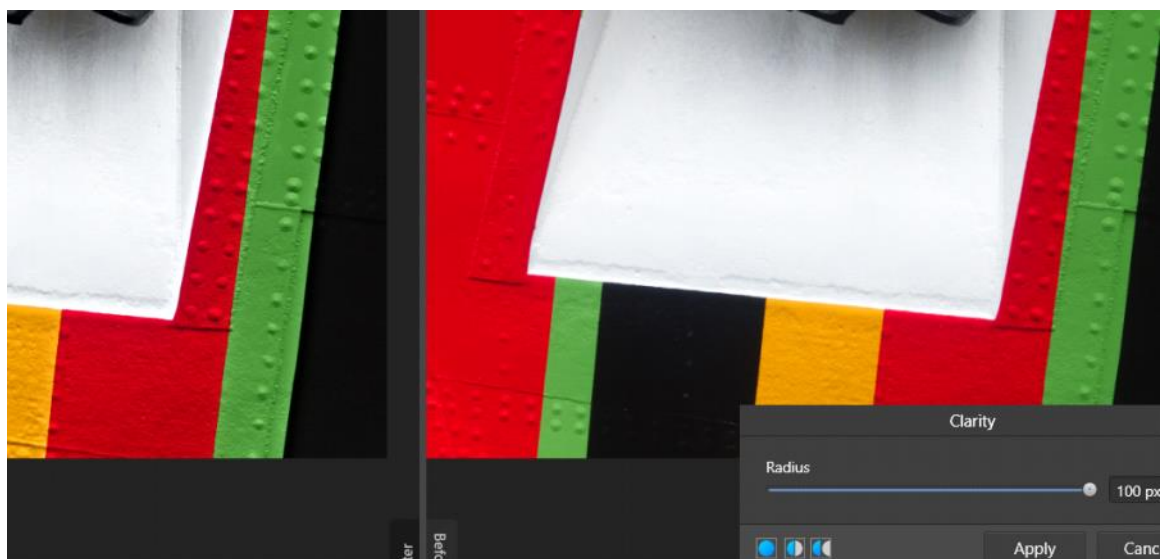

After "Apply" -

Setting used here -

Using the clarity sharpen -

Product seems more similar to preview

Second time, following reply on website..

Stuart, are you previewing at 100% or larger when using these filters? If you're at a lower zoom level, Photo may be using a mipmapped (lower resolution) version of the image for performance reasons - therefore the preview will look different from the final result that is applied to the full resolution image.

There shouldn't be a huge difference, however. Could you perhaps try the same filters at 1:1 zoom and see if this solves the issue? (And if not, please let us know!)

Thanks,
James

Developed the orf file unchanged and then applied USM - these are zoomed to 100% then backed off a bit as suggested by

Result -
